fight the

smell

with powered ventilation
or re-circulation

TO the hungry, the smell of cooking is a delight, and a cosy kitchen is welcoming on a cold day.

But cooking smells can linger long after the meal, and cosy can become jungle hot in summer.

Just opening windows can provide an answer to both problems. But it can bring new troubles, from rain and wind in winter and insects in summer.

The alternative is a powered ventilation system, of which there are many available at moderate cost.

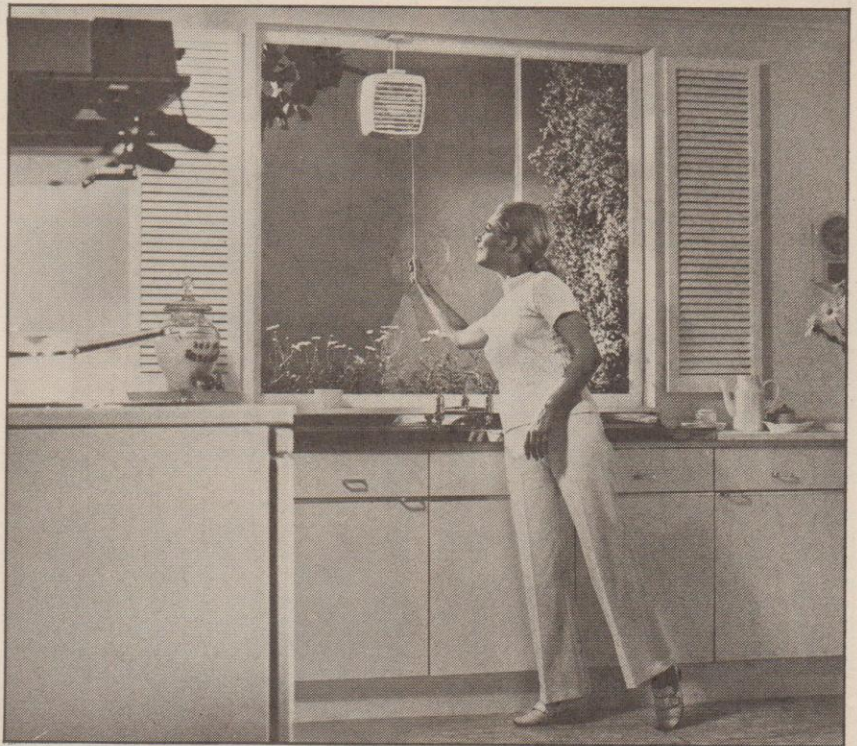

The most popular is the simple axial fan extractor. Easily installed in a window or through-the-wall, such fans can provide the 10,000 to 15,000 cu. ft. per hour extraction rates required by the average kitchen, at about the same running cost as a 100W bulb. Models are available to suit most pockets, some with two or more speeds and reversibility.

More powerful than the axial types are the centrifugal and turbine types, which are also available for self installation.

Where cooking smells are the main problem, a re-circulating cooker hood provides an answer, and combined or extractor types are available.

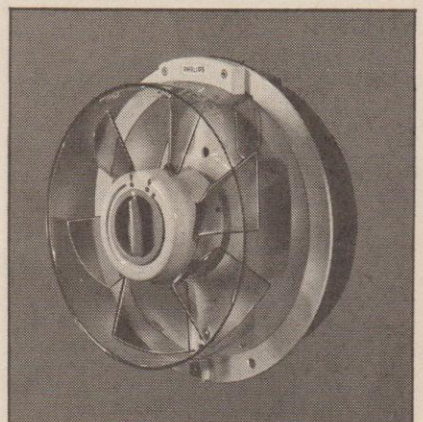

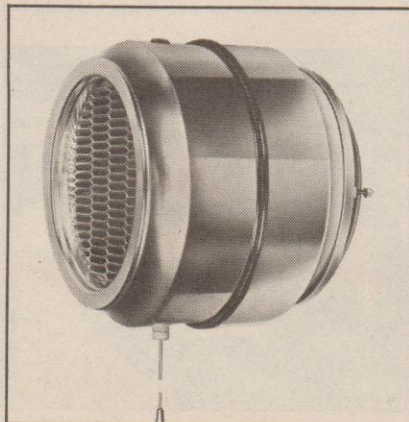

1. An ideal location for an extractor fan is the top of the window. In this case it is the Xpelair GX6C.

2. Cooker hoods may extract or clean and re-circulate air. This one below shows the Xpelair KH601, at £48.75 inc. VAT does either.

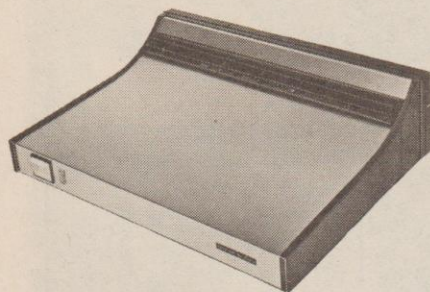

3. Designed for window mounting, the Ventwin WVB extractor model 611, at £14.50, will ventilate a kitchen 11ft. x 8ft. x 8ft.

4. The Philips HR 3407 two-speed extractor fan has a flow reversing facility to suck in cool air. £20.95 inc. VAT.

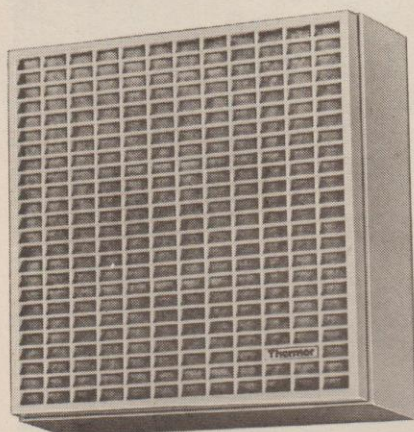

fight the **fug**

Continued

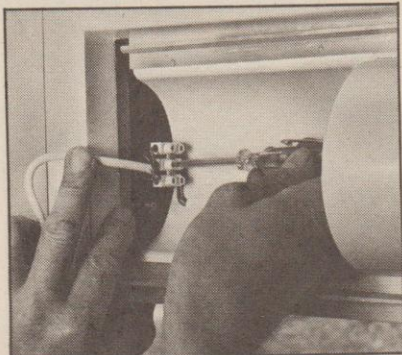

With a two layer filter system and tangential fans, the Power-lectric cooker hood comes in six finishes from £36.38 to £47.25 inc. VAT.

Thermor's Turbinex TX2 two-speed extractor uses a powerful centrifugal fan and requires a through-the-wall outlet of only 4in. £35.62½.

Lead and wiring are connected at the terminal block and connected to power supply.

A complete departure from the axial fan types, the Nu-Flow uses twin rotary impellers.

After waste is cut away, the edge is cleaned up and the end piece re-fitted.

The fan is bedded on putty or mastic and screwed to the de-glazed window frame.

The aluminium cover is sprung into place over the fan body.

The width of the window—less ¼in.—is marked on the 'dead' end of the fan body.

The aluminium cover plate is cut to the same length and the end piece re-fitted.

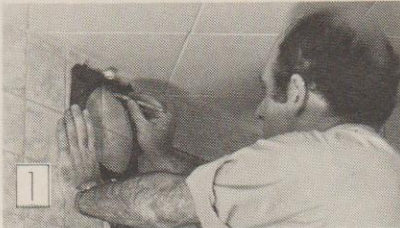

The glass, cut down by 6¼in., fits into this plastic sealing strip on re-glazing.

A rubber grommet is fitted to the cover to protect the cord from chafing.

Fantastic!

1 Use the clamp plate to mark internal wall.

2 Open up the hole through the wall.

3 In solid walls, line the hole with mortar.

4 Mount inner and outer clamp plates.

5 Fit fan unit and block up redundant vent.

Forgive us, but it's the only word to describe our offer to PH readers this month, which takes some of the heat out of inflation, by knocking £4.71 off the recommended retail price of the popular GEC-Xpelair GXC6 extractor fan.

Designed for fitting into a window pane, or through-the-wall (with trunking in cavity walls) this appliance has BEAB approval, is guaranteed for two years, and is capable of ventilating a room 10ft. x 8ft. x 8ft. (3.05m x 2.44m x 2.44m).

An unobtrusive white plastic body houses the motor and impeller, and the extractor is fitted with cord-operated back draught prevention shutters.

We supply it in window-fitting form, but if you want to fit it through the wall, 20in. (507mm) connecting ladder strips are available from GEC-Xpelair's Service Department at 46p per pair.

Alternatively the fan can be fixed by screwing the clamp plates on either side of the wall.

The recommended retail price is £19.31 incl. VAT. Our price is £14.60, including carriage and packing.

— CUT ROUND DOTTED LINE —

Your order will normally be despatched in time for you to receive it within 28 days, but please allow an additional 14 days to cover any carriage delay. Remittances must be by postal order or cheque (name and address on back of cheques please), crossed, and made payable to IPC Magazines Limited. This offer is open to readers in Northern Ireland, England, Scotland, Wales and Channel Islands only. It is not available in Eire or Overseas.

MCLACHLAN

Give me air.

Enclosed in today's world of stuffy, smoke filled, food impregnated rooms is it any wonder we sometimes feel stifled?

Today's kitchens can do without yesterday's leftovers. And so can Mrs. Jones.

Slaving over a hot stove can be wearing on the cook. And the kitchen decorations.

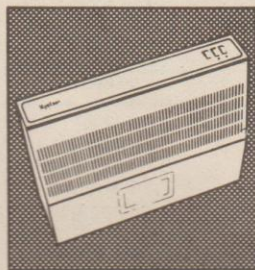

Steam from boiling saucepans, condensation. Air clogged with fumes and grease.

The mess ends on windows and walls. Scraps rot in the bin. Smells linger on and on. Time she had Xpelair to clean things up.

Xpelair Cooker Hood in 2 sizes.

Xpelair Window/Wall Fan.

Pelican Waste Disposal Unit.

Xpelair. That's better.

Wherever we live, work or relax Xpelair will freshen and improve the atmosphere. With a whole range of window, wall, ceiling and duct fans for any room from a kitchen to a large works canteen.

Or, to warm things up there's a range of fan convector radiant and fan heaters. And for the home, waste disposers, cooker hoods and humidifiers. All better made.

And smartly styled. To do a better job. To live well, you need to breathe well too.

Xpelair gives you breathing room.

I'd like to give myself some breathing room. Please send me details of Xpelair products ticked below.

Change it for new
at 220 cubic feet a minute.

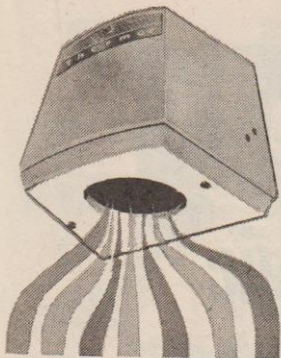

Suddenly it's easy to get rid of stale smells, and greasy condensation. Philips Window Fans are powerful, inexpensive, fantastically easy to fit...the only fans carefully designed in see-through materials to look at home in your home. The two speed 8" model for larger rooms shifts up to 220 cubic feet a minute. The 6" model for smaller rooms and WC's shifts up to 116 cubic feet a minute. See your Philips Dealer.

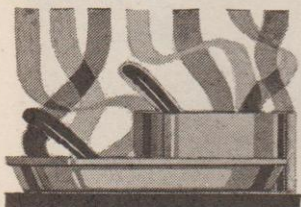

PHILIPS

Simply years ahead.

THE Thermor EXTRACTAIR CANOPY

The infallible method to rid your kitchen and home of obnoxious, unhealthy decor-destructive smells, steam and grease vapours.

Neat and space saving in size, the secret of the high extraction rate of the EXTRACTAIR lies in its turbine type nylon impeller.

Performance does not vary—no filter or chemical element to become clogged or saturated.

Outlet through wall or via duct or disused chimney. Economic to purchase—note and compare price of £24.00 (including VAT).
