Argos Quick Guide to Air Coolers

HOW DO THEY WORK?

Air coolers work by the simple evaporation of water. As such they will work at their best in mild to low humidity, and will have less of a benefit in warm, wet weather. They do not require external ventilation like Air Conditioners, but do require the water tank to be refilled.

HOW COLD CAN I MAKE A ROOM?

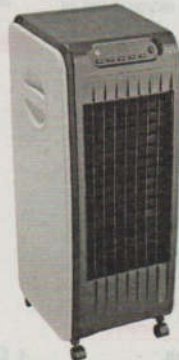

This will depend on the relative humidity of the environment, but will generally drop the temperature by 2 - 3 degrees celsius. Air conditioners work better at dropping the temperature, especially in humid environments.

WHAT ROOM SIZE ROOM WILL THEY COOL?

Air coolers work best in small to medium size rooms.
