

Argos Guide to cooling and air treatment

Keep cool all summer long with one of our many air-cooling products.

Fans

Fans create a flow of air by turning blades which direct the air to keep you cool. They often have more than one speed setting and some can be set to oscillate.

Choose from our wide range of styles and sizes: desk, pedestal or tower.

We even have fans featuring new bladeless technology.

Air Coolers and Air Conditioners

Cool the air by 2 to 3°C with a portable Air Cooler when the air temperature is hot and the humidity level is low.

Stabilise the air temperature with an Air Conditioning unit. They extract the warm air from the room and recycle it back as cold air. Heat is expelled through a hose which must be vented through a window or wall.

Humidifiers and Dehumidifiers

Dehumidifiers remove excess moisture that can lead to condensation, damp, mould and mildew. Essential if you generate a lot of steam.

Humidifiers optimise the humidity level in your home reducing the risk of coughs and colds which can be caused by an environment that is too dry.

Air Purifiers

Purify the air in your room with an Air Purifier. The filter traps airborne particles alleviating symptoms such as asthma, hay fever, excessive sneezing, itchy eyes and runny noses.

dyson air multiplier

No blades. No buffeting.

Blades cause buffeting.

The blades on conventional fans cause unpleasant buffeting because they chop the air before it hits you.

No blades. No buffeting.

Air Multiplier™ technology amplifies surrounding air, giving an uninterrupted stream of smooth air.

Argos Quick Guide to fans

DESK FANS

Ideal for both the home and office for an instant breeze.

PEDESTAL FANS

Great for cooling down larger rooms. Many of these fans have variable speed settings with adjustable height and tilt controls.

TOWER FANS

Ideal if you have limited space as these can be positioned neatly in a corner. Thought to be quieter than conventional fans, they are ideal for the bedroom.

AIR MULTIPLIER™ FANS

Air Multiplier™ technology amplifies surrounding air providing an uninterrupted stream of smooth air.
